IS4108- IS Strategies

LECTURE 01- ROLE OF INFORMATION SYSTEMS IN ORGANIZATIONS

Role of Information Systems in Organizations

What is an Information System (IS)?

An Information System is a combination of;

- People
- Processes
- Technology
- Data

Information systems turn data into useful information for action.

Why organizations need IS

Modern organizations operate in;

- Competitive markets
- Fast decision environments
- Digital economies

Without IS?

- Decisions become slow
- Coordination becomes difficult
- Errors increase

Components of an IS?

What is the most important component?

Major Roles of Information Systems in Organizations

1. Operational Support

Supports daily business activities.

- Payroll processing
- Inventory management
- Order processing

Benefits?

2. Managerial Decision Support

Helps managers analyze information.

Systems provide;

- Reports
- Dashboards
- Performance summaries

Benefits?

3. Communication & Collaboration

IS connects employees and departments.

- Email systems
- Collaboration platforms
- Video conferencing

Impact?

- Faster communication
- Remote work capability
- Knowledge sharing

4. Knowledge Management

Organizations store and reuse knowledge.

- Document repositories
- Learning systems
- Research databases

Why do we need KM?

- Organizational learning
- Reduced knowledge loss

5. Strategic Advantage

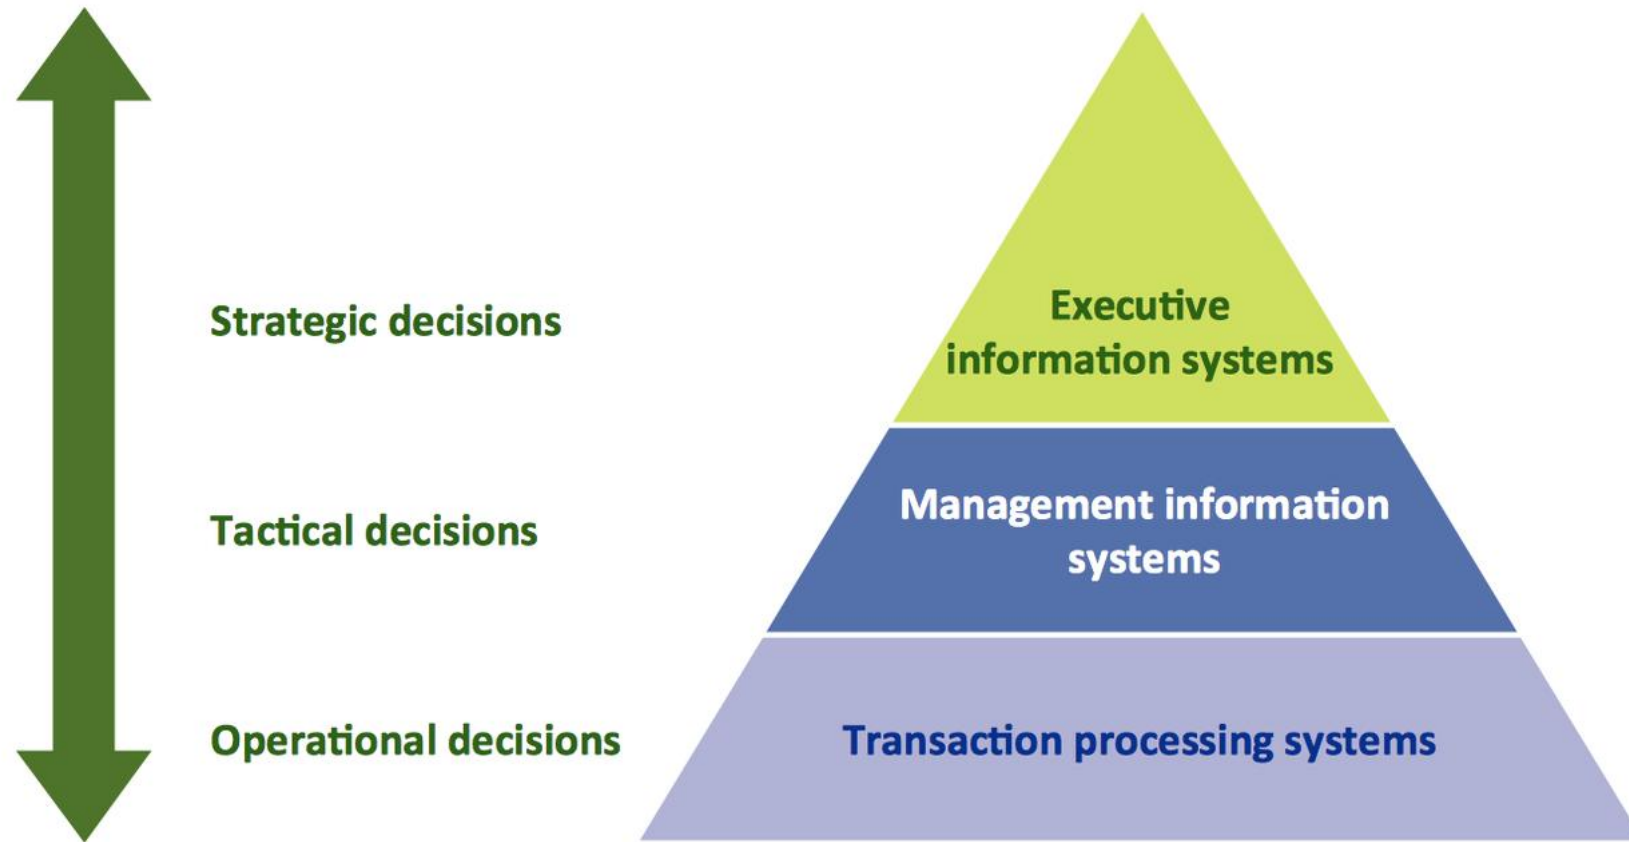

IS helps organizations to compete.

How?

- Online services
- Data-driven marketing
- Customer personalization
- SCM optimization
- Innovations

Types of ISs

Why ISs in Organizations?

- Efficiency
- Effectiveness
- Innovation
- Customer Satisfaction

Challenges and Issues in ISs?

- What are those?
