

IT Procurement Management

IS4105- Lecture 09

Presenter- PKDK Kaushalya

Contract Change Control Systems

- 
- A Contract Change Control System is a formal process used to identify, evaluate, approve, document, and manage changes made to a contract during a project or procurement process.
 - It ensures that all contract modifications are properly controlled and authorized.

Reasons for the changes

- Scope changes
- Budget adjustments
- Schedule delays
- Technology updates
- Client requirements
- Unexpected risks or issues

Contract Change Control Process

Main Purposes of the Change Control

- Prevent unauthorized changes
- Maintain contract accuracy
- Control project costs and schedules
- Reduce disputes between parties
- Ensure accountability and transparency
- Improve project monitoring and documentation

Poor Change Control leads to;

Risk	Impact
Unauthorized changes	Budget and scope issues
Poor documentation	Legal disputes
Lack of communication	Stakeholder conflicts
Delayed approvals	Project delays
Cost overruns	Financial losses

Best Practices

- Use formal documentation
- Clearly define approval authority
- Maintain transparent communication
- Evaluate impacts carefully
- Keep updated records
- Conduct regular reviews
