IS4104 - System Administration and Maintenance
Group Activity 01

Time Frame: (30 mins)

The goal of this tutorial is explore the foundation elements of system administration at a high level by thinking like system administrators.

Activity 1

1. Divide class into groups of 4–5 students.

“Your group is hired as the IT team of a small company in Colombo.

The company needs a complete computer system setup. You must decide how to build and manage it.”

2. Instructions:.

- a. Discuss with your group and answer all sections below
- b. You can use your own ideas or search online
- c. No need for deep technical details.
- d. Be ready to present your answers.

3. Tasks:

- a. System Setup:
 - i. What types of computers or servers will your company need?
 - ii. What operating system will you use? (Linux / Windows / Both)

- iii. Why did you choose it?
- b. User & Access Management:
 - i. How will employees get accounts?
 - ii. Who will have admin access?
 - iii. Why is it important to control access?
- c. Security Plan:
 - i. How will you protect data?
 - ii. Password rules?
 - iii. Basic security measures?
- d. Backup & Recovery
 - i. What data will you back up?
 - ii. How often?
 - iii. What if system crashes?
- e. Documentation:
 - i. What records will you keep?
 - ii. Why is documentation important?
- f. Ethics:
 - i. What should a system administrator NEVER do?
 - ii. How to handle private data?
- g. Automation (Simple Idea):
 - i. What tasks can be automated?
 - ii. Why is automation useful?
- h. Monitoring:
 - i. How will you check if systems are working?
- i. Cloud:
