

Final Quiz

Question 1

A company adopts leading-edge networking technology despite lacking trained staff and stable documentation. The **MOST** probable consequence is:

- a. Immediate operational stability
- b. **Increased operational risk and support difficulty**
- c. Reduced troubleshooting complexity
- d. Elimination of scalability concerns

Question 2

A company chooses many inexpensive servers instead of a few high-end systems. The **PRIMARY** trade-off is between:

- a. Documentation and monitoring
- b. **Reliability and manageability**
- c. Security and DNS resolution
- d. Scalability and portability

Question 3

A company deploys highly available servers but lacks proper documentation and escalation procedures. During an outage, recovery is delayed because no one understands the failover process. Which principle failure contributed **MOST** to the incident?

- a. Automation
- b. **Communication**
- c. Centralization
- d. Vendor neutrality

Question 4

A company has excellent network hardware. During an outage, recovery is delayed because administrators cannot identify device configurations or dependencies. Which practice would **MOST** reduce future downtime?

- a. Replacing all switches annually
- b. **Maintaining comprehensive network documentation**
- c. Increasing Internet bandwidth
- d. Purchasing higher-performance routers

Question 5

A company performs backups regularly but never tests restoration. What is the **MOST** significant risk?

- a. Increased WAN latency
- b. **Recovery procedures may fail during an actual disaster**
- c. Reduced recovery performance

d. Resulting longer system downtimes

Question 6

A system administrator segments a LAN to isolate traffic and apply different policies to departments. Which device primarily enables this functionality?

a. **Switch**

b. Firewall

c. NAS

d. Router

Question 7

Data integrity means ensuring that data:

a. A state of data

b. Can be only accessed by authorized parties

c. **Is not altered by unauthorized or unintended sources**

d. Can be proven of the origin of the data in front of a third party

Question 8

If a disaster has a low probability but extremely high financial impact, the organization will **MOST** likely:

a. **Consider investing in mitigation measures**

b. Ignore mitigation entirely

c. Eliminate all backup systems

d. Avoid performing risk analysis

Question 9

In a client-server environment, clients primarily:

a. Provide centralized services

b. Replace server infrastructure

c. **Consume services provided by servers**

d. Manage network routing

Question 10

Risk analysis primarily involves determining:

a. Employee salaries and bonuses

b. Network threats

c. **Types of disasters and their likelihood**

d. Software development timelines

Question 11

The **PRIMARY** goal of disaster recovery (DR) is to:

a. Ensure systems are always offline during maintenance

- b. Eliminate all business risks completely
- c. **Prepare systems and processes for rapid recovery**
- d. Replace all hardware annually

Question 12

What is identified as the **FIRST** step in building a disaster recovery plan?

- a. Replacing damaged hardware
- b. Purchasing backup servers
- c. Training the helpdesk
- d. **Performing a risk analysis**

Question 13

What is the **PRIMARY** advantage of off-site storage?

- a. Reduced software licensing costs
- b. Faster CPU performance
- c. **Protection against site-wide disasters**
- d. Elimination of malware infections

Question 14

What is the **PRIMARY** benefit of centralized backup management?

- a. **Improved policy consistency and administration**
- b. Faster workstation boot times
- c. Reduced file permissions
- d. Elimination of storage requirements

Question 15

Which action **BEST** demonstrates professional integrity in system administration?

- a. Concealing configuration mistakes from management
- b. Disabling logging to reduce storage consumption
- c. **Documenting administrative actions and following established procedures**
- d. Sharing privileged access credentials during emergencies

Question 16

Which action would **MOST** improve resilience in a rapidly growing organization?

- a. Allowing unrestricted local configurations
- b. **Centralizing core infrastructure management**
- c. Increasing individual administrator privileges
- d. Eliminating change approval processes

Question 17

Which administrative action **MOST** directly improves confidentiality?

- a. Using hashing to store passwords
- b. Increasing network throughput
- c. Take strong actions to maintain the integrity
- d. **Restricting access using permissions and authentication**

Question 18

Which administrative activity **MOST** directly reduces vulnerability/flaws exposure?

- a. **Applying security patches promptly after testing**
- b. Increasing local storage capacity
- c. Reducing password expiration requirements
- d. Expanding user access permissions

Question 19

Which characteristic is **MOST** important in effective help desk communication?

- a. Escalating every issue immediately
- b. Prioritizing technical terminology over clarity
- c. Minimizing all user interaction
- d. **Providing clear, professional, and understandable guidance**

Question 20

Which factor is **MOST** critical before moving a data center?

- a. Purchasing additional workstations
- b. Reducing monitoring alerts
- c. **Performing full backups and testing recovery**
- d. Replacing all network switches

Question 21

Which factor **MOST** directly contributes to high system availability?

- a. Removing redundant infrastructure to reduce complexity
- b. Increasing the number of local administrator accounts
- c. **Designing systems with redundancy and fault tolerance**
- d. Performing maintenance only after failures occur

Question 22

Which factor should **MOST** influence disaster mitigation spending decisions?

- a. Internet bandwidth utilization level
- b. Hardware brand popularity
- c. **Estimated risk probability and financial impact**
- d. Number of employees in the organization

Question 23

Which factor should **MOST** influence the selection of a server operating system?

- a. Popularity among the product users
- b. Multimedia performance capabilities
- c. User interface appearance
- d. **Stability, security, and workload requirements**

Question 24

Which mechanism **MOST** directly protects data integrity in enterprise systems?

- a. Increasing network bandwidth allocation
- b. Reducing audit logging frequency
- c. **Controlled modification procedures and validation mechanisms**
- d. Expanding local storage availability

Question 25

Which of the following is **MOST** likely to be configured on a server system?

- a. Personal media library
- b. **Web hosting service**
- c. Gaming software
- d. Video editing software

Question 26

Which OSI layer directly interacts with user applications such as web browsers and email clients?

- a. **Application**
- b. Session
- c. Transport
- d. Presentation

Question 27

Which practice **BEST** balances security and usability?

- a. Requiring administrative approval for every routine action
- b. Prioritizing convenience regardless of security exposure
- c. Restricting all user access to minimize security incidents
- d. **Implementing strong controls while allowing users to complete tasks efficiently**

Question 28

Which principle is **MOST** closely associated with informed consent?

- a. Restricting users from requesting support services
- b. Encrypting all communications within the organization
- c. Preventing all system downtime automatically
- d. **Transparency before performing impactful administrative actions**

Question 29

Which situation **BEST** demonstrates proper handling of law enforcement requests?

- a. Sharing administrative credentials temporarily for investigation purposes
- b. **Verifying identity and following organizational procedures before disclosure**
- c. Providing requested logs immediately without verification
- d. Refusing all requests regardless of legal authority

Question 30

Which situation **MOST** likely requires escalation to higher-level support?

- a. **A network outage affecting multiple departments**
- b. A request for printer installation
- c. A routine password reset request
- d. A user asking for desktop customization assistance

Question 31

Which statement **BEST** describes the role of an operating system?

- a. It stores backups permanently
- b. It replaces application software
- c. **It manages hardware resources and provides services for applications**
- d. It only provides internet access

Question 32

Which statement **BEST** differentiates security policies from procedures?

- a. Policies only apply to management personnel
- b. **Policies define rules and objectives; procedures describe implementation steps**
- c. Policies are optional, while procedures are legally binding
- d. Procedures define organizational goals; policies describe hardware settings

Question 33

Which statement **BEST** explains the purpose of backups?

- a. **To recover systems and data after failures**
- b. To reduce storage usage
- c. To reduce the cost
- d. To improve processor speed

Question 34

Which statement **BEST** explains the relationship between technical authority and ethics in system administration?

- a. Greater technical authority reduces ethical responsibility
- b. There is no connection between technical authority and ethics

- c. Ethical concerns are primarily management responsibilities
- d. **Administrative privileges increase the importance of ethical conduct**

Question 35

Which statement **BEST** explains why social engineering is dangerous?

- a. It bypasses physical security mechanisms automatically
- b. **It exploits human trust rather than technical vulnerabilities alone**
- c. It permanently disables backup systems remotely
- d. It only affects outdated operating systems

Question 36

Which statement **BEST** reflects the definition of system administration?

- a. It is primarily hardware maintenance
- b. It focuses mainly on operating system troubleshooting
- c. **It combines technical and organizational responsibilities**
- d. It is independent of organizational communication

Question 37

Why are standard operating system configurations important in organizations?

- a. They reduce monitor usage
- b. They increase internet bandwidth
- c. **They simplify administration and troubleshooting**
- d. They eliminate security threats completely

Question 38

Why are tested backups significantly more valuable than untested backups?

- a. Untested backups increase recovery speed automatically
- b. **Successful restoration capability is verified through testing**
- c. Backup testing eliminates the need for redundancy
- d. Tested backups require less storage space

Question 39

Why is documentation considered essential in system administration?

- a. **It supports consistency, troubleshooting, and knowledge transfer**
- b. It prevents all configuration-related failures automatically
- c. It eliminates the need for technical training
- d. It replaces automated monitoring systems entirely

Question 40

Why is social engineering considered a major security threat despite strong technical controls?

- a. **It targets human behavior rather than technical vulnerabilities**

- b. It disables all backups automatically
- c. It targets system behavior rather than technical vulnerabilities
- d. It directly affects the integrity of the information
