

Quiz 01 - System Administration and Maintenance

Total points 38/40 ?

Instructions

- Answer all 40 Questions.
- Time limit: 20 minutes
- Choose the MOST suitable answer.

0 of 0 points

Questions

38 of 40 points

✓ The PRIMARY goal of disaster recovery (DR) is to: 1/1

- ☐ Replace all hardware annually
- ☐ Eliminate all business risks completely
- ☐ Ensure systems are always offline during maintenance
- ☒ Prepare systems and processes for rapid recovery ✓

✓ Which characteristic is MOST important in effective help desk communication? 1/1

- ☐ Minimizing all user interaction
- ☒ Providing clear, professional, and understandable guidance ✓
- ☐ Escalating every issue immediately
- ☐ Prioritizing technical terminology over clarity

✓ Which of the following is MOST likely to be configured on a server system? 1/1

- ☒ Web hosting service ✓
- ☐ Video editing software
- ☐ Gaming software
- ☐ Personal media library

✓ Which administrative activity MOST directly reduces vulnerability/flaws exposure? 1/1

- ☐ Increasing local storage capacity
- ☒ Applying security patches promptly after testing ✓
- ☐ Expanding user access permissions
- ☐ Reducing password expiration requirements

✓ Which action BEST demonstrates professional integrity in system administration? 1/1

- ☐ Concealing configuration mistakes from management
- ☒ Documenting administrative actions and following established procedures ✓
- ☐ Sharing privileged access credentials during emergencies
- ☐ Disabling logging to reduce storage consumption

✓ What is the PRIMARY advantage of off-site storage? 1/1

- ☐ Faster CPU performance
- ☐ Reduced software licensing costs
- ☒ Protection against site-wide disasters ✓
- ☐ Elimination of malware infections

✓ Which statement BEST describes the role of an operating system? 1/1

- ☐ It only provides internet access
- ☒ It manages hardware resources and provides services for applications ✓
- ☐ It replaces application software
- ☐ It stores backups permanently

✓ Which principle is MOST closely associated with informed consent? 1/1

- ☒ Transparency before performing impactful administrative actions ✓
- ☐ Preventing all system downtime automatically
- ☐ Restricting users from requesting support services
- ☐ Encrypting all communications within the organization

✓ Which factor is MOST critical before moving a data center? 1/1

- ☐ Replacing all network switches
- ☐ Reducing monitoring alerts
- ☐ Purchasing additional workstations
- ☒ Performing full backups and testing recovery ✓

✓ Which situation BEST demonstrates proper handling of law enforcement requests? 1/1

- ☐ Sharing administrative credentials temporarily for investigation purposes
- ☐ Refusing all requests regardless of legal authority
- ☒ Verifying identity and following organizational procedures before disclosure ✓
- ☐ Providing requested logs immediately without verification

✓ What is identified as the FIRST step in building a disaster recovery plan? 1/1

- ☒ Performing a risk analysis ✓
- ☐ Purchasing backup servers
- ☐ Training the helpdesk
- ☐ Replacing damaged hardware

✓ Which action would MOST improve resilience in a rapidly growing organization? 1/1

- ☐ Increasing individual administrator privileges
- ☒ Centralizing core infrastructure management ✓
- ☐ Allowing unrestricted local configurations
- ☐ Eliminating change approval processes

✓ Which factor should MOST influence the selection of a server operating system? 1/1

- ☐ User interface appearance
- ☒ Stability, security, and workload requirements
- ☐ Popularity among the product users
- ☐ Multimedia performance capabilities

✓ A company performs backups regularly but never tests restoration. What is the MOST significant risk? 1/1

- ☐ Increased WAN latency
- ☐ Reduced recovery performance
- ☒ Recovery procedures may fail during an actual disaster
- ☐ Resulting longer system downtimes

✓ Which factor MOST directly contributes to high system availability? 1/1

- ☐ Removing redundant infrastructure to reduce complexity
- ☒ Designing systems with redundancy and fault tolerance
- ☐ Increasing the number of local administrator accounts
- ☐ Performing maintenance only after failures occur

✓ What is the PRIMARY benefit of centralized backup management? 1/1

- ☐ Reduced file permissions
- ☒ Improved policy consistency and administration ✓
- ☐ Elimination of storage requirements
- ☐ Faster workstation boot times

✓ Risk analysis primarily involves determining: 1/1

- ☐ Employee salaries and bonuses
- ☒ Types of disasters and their likelihood ✓
- ☐ Software development timelines
- ☐ Network threats

✓ Which situation MOST likely requires escalation to higher-level support? 1/1

- ☐ A routine password reset request
- ☐ A request for printer installation
- ☒ A network outage affecting multiple departments ✓
- ☐ A user asking for desktop customization assistance

✓ Which practice BEST balances security and usability?

1/1

- ☒ Implementing strong controls while allowing users to complete tasks efficiently ✓
- ☐ Restricting all user access to minimize security incidents
- ☐ Prioritizing convenience regardless of security exposure
- ☐ Requiring administrative approval for every routine action

✓ Which category of disaster includes hacking?

1/1

- ☐ Natural
- ☒ Human ✓
- ☐ Environmental
- ☐ Technical

✓ Which statement BEST differentiates security policies from procedures?

1/1

- ☒ Policies define rules and objectives; procedures describe implementation steps ✓
- ☐ Policies are optional, while procedures are legally binding
- ☐ Procedures define organizational goals; policies describe hardware settings
- ☐ Policies only apply to management personnel

✓ Which factor should MOST influence disaster mitigation spending decisions? 1/1

- ☐ Hardware brand popularity
- ☒ Estimated risk probability and financial impact
- ☐ Number of employees in the organization
- ☐ Internet bandwidth utilization level

✓ Which statement BEST explains why social engineering is dangerous? 1/1

- ☐ It bypasses physical security mechanisms automatically
- ☐ It permanently disables backup systems remotely
- ☐ It only affects outdated operating systems
- ☒ It exploits human trust rather than technical vulnerabilities alone

✓ A company deploys highly available servers but lacks proper documentation and escalation procedures. During an outage, recovery is delayed because no one understands the failover process. Which principle failure contributed MOST to the incident? 1/1

- ☐ Automation
- ☒ Communication ✓
- ☐ Centralization
- ☐ Vendor neutrality

✓ Which action would MOST likely violate professional confidentiality obligations? 1/1

- ☐ Reviewing logs during authorized troubleshooting
- ☒ Discussing sensitive employee information with unauthorized individuals ✓
- ☐ Verifying user identity before resetting passwords
- ☐ Encrypting backup storage systems

✓ Data integrity means ensuring that data:

1/1

- ☒ Is not altered by unauthorized or unintended sources
- ☐ Can be only accessed by authorized parties
- ☐ Can be proven of the origin of the data in front of a third party
- ☐ A state of data

✗ Which characteristic is MOST important in a help desk environment?

0/1

- ☒ Effective communication with users
- ☐ Limiting user interaction
- ☐ Avoiding escalation procedures
- ☐ Ignoring documentation

Correct answer

- ☒ Limiting user interaction

✓ Why is social engineering considered a major security threat despite strong technical controls? 1/1

- ☐ It targets system behavior rather than technical vulnerabilities
- ☒ It targets human behavior rather than technical vulnerabilities ✓
- ☐ It disables all backups automatically
- ☐ It directly affects the integrity of the information

✓ A company adopts leading-edge networking technology despite lacking trained staff and stable documentation. The MOST probable consequence is: 1/1

- ☐ Immediate operational stability
- ☐ Reduced troubleshooting complexity
- ☒ Increased operational risk and support difficulty ✓
- ☐ Elimination of scalability concerns

✗ A company chooses many inexpensive servers instead of a few high-end systems. The PRIMARY trade-off is between: 0/1

- ☐ Reliability and manageability
- ☒ Scalability and portability
- ☐ Security and DNS resolution
- ☐ Documentation and monitoring

✗

Correct answer

- ☒ Reliability and manageability

✓ Which administrative action MOST directly improves confidentiality? 1/1

- ☐ Using hashing to store passwords
- ☐ Take strong actions to maintain the integrity
- ☐ Increasing network throughput
- ☒ Restricting access using permissions and authentication

✓

✓ Why are standard operating system configurations important in organizations?

1/1

- ☐ They reduce monitor usage
- ☒ They simplify administration and troubleshooting
- ☐ They eliminate security threats completely
- ☐ They increase internet bandwidth

✓ Why is documentation considered essential in system administration?

1/1

- ☐ It eliminates the need for technical training
- ☒ It supports consistency, troubleshooting, and knowledge transfer
- ☐ It replaces automated monitoring systems entirely
- ☐ It prevents all configuration-related failures automatically

✓ Which statement BEST reflects the definition of system administration?

1/1

- ☐ It is primarily hardware maintenance
- ☐ It is independent of organizational communication
- ☒ It combines technical and organizational responsibilities
- ☐ It focuses mainly on operating system troubleshooting

✓ Which mechanism MOST directly protects data integrity in enterprise systems? 1/1

- ☒ Controlled modification procedures and validation mechanisms ✓
- ☐ Increasing network bandwidth allocation
- ☐ Expanding local storage availability
- ☐ Reducing audit logging frequency

✓ In a client-server environment, clients primarily: 1/1

- ☐ Provide centralized services
- ☐ Replace server infrastructure
- ☒ Consume services provided by servers ✓
- ☐ Manage network routing

✓ Which statement BEST explains the relationship between technical authority and ethics in system administration? 1/1

- ☐ Greater technical authority reduces ethical responsibility
- ☒ Administrative privileges increase the importance of ethical conduct ✓
- ☐ Ethical concerns are primarily management responsibilities
- ☐ There is no connection between technical authority and ethics

✓ If a disaster has a low probability but extremely high financial impact, the organization will MOST likely: 1/1

- ☐ Ignore mitigation entirely
- ☒ Consider investing in mitigation measures ✓
- ☐ Eliminate all backup systems
- ☐ Avoid performing risk analysis

✓ Which statement BEST explains the purpose of backups? 1/1

- ☐ To improve processor speed
- ☐ To reduce storage usage
- ☒ To recover systems and data after failures ✓
- ☐ To reduce the cost

✓ Why are tested backups significantly more valuable than untested backups? 1/1

- ☐ Tested backups require less storage space
- ☒ Successful restoration capability is verified through testing ✓
- ☐ Untested backups increase recovery speed automatically
- ☐ Backup testing eliminates the need for redundancy
